_____
Additional information: The authorized mail servers IPs are 192.168.2.10 and 192.168.2.11.
The network's subnet is 192.168.2.0/25.

Which of the following are the MOST appropriate courses of action a security administrator could take to eliminate this risk? (Select TWO).
A. Identify the origination point for malicious activity on the unauthorized mail server.
B. Disable open relay functionality.
C. Enable STARTTLS on the spam filter.
D. Shut down the SMTP service on the unauthorized mail server.
E. Block port 25 on the firewall for all unauthorized mail servers.
Answer: D,E
Explanation:
In this question, we have an unauthorized mail server using the IP: 192.168.2.55.
Blocking port 25 on the firewall for all unauthorized mail servers is a common and recommended security step. Port 25 should be open on the firewall to the IP addresses of the authorized email servers only (192.168.2.10 and 192.168.2.11). This will prevent unauthorized email servers sending email or receiving and relaying email.
Email servers use SMTP (Simple Mail Transfer Protocol) to send email to other email servers. Shutting down the SMTP service on the unauthorized mail server is effectively disabling the mail server functionality of the unauthorized server.
Incorrect Answers:
A: You shouldn't worry about identifying the origination point for the malicious activity on the unauthorized mail server. There isn't much you could do about the remote origination point even if you did identify it. You have an 'unauthorized' mail server. That is what you should be dealing with.
C: In this question, the email was received by the unauthorized email server (192.168.2.55) ready to be collected by the recipient. The email was not relayed (forwarded) to other email servers. Disabling open relay functionality will not stop the emails. You need to disable all email (SMTP) functionality of the unauthorized server, not just relaying.
E: STARTTLS enables TLS encryption on communications with the spam filter. It will do nothing to prevent the usage of the unauthorized email server.

NEW QUESTION: 3
As an HCM Integration Specialist you are responsible for preparing and loading data into HCM Cloud HCM Data Loader.
What process flow do you need to follow to ensure the migration is successful?
A. Place zip file(s) containing data on the SFTP server. HCM Data Loader decompresses the zip files and imports individual data lines into staging tables. Objects are then loaded to the Oracle Fusion Application tables and error handling is done through the HCM Data Loader Interface or via the Data Set Summary.
B. Place dat file(s) containing data on the WebCenter Content server and submit a request to import and load the zip file(s). HCM Data Loader decompresses the zip files and imports individual data lines into staging tables, and objects are then loaded to the Oracle Fusion Application tables. Error handling is done through the HCM Data Loader Interface or via the Data Set Summary.
C. Place dat file(s) containing data on the WebCenter Content server and submit a request to import and load the zip file(s). HCM Data Loader loads all the data directly to the Oracle Fusion Application tables and error handling is done through the HCM Data Loader Interface or via the Data Set Summary.
D. Place zip file(s) containing data on the WebCenter Content server and submit a request to

import and load the zip file(s). HCM Data Loader decompresses the zip files and imports individual data lines into staging tables. Objects are then loaded to the Oracle Fusion Application tables and error handling is done through the HCM Data Loader Interface or via the Data Set Summary.
Answer: D
