- C.** M-Series modules support FcoE.
- D.** F1-Series and F2-Series modules cannot exist in the same VDC.
- E.** F3-Series modules lack support for FEX.

**Answer: A,E**

#### **NEW QUESTION: 3**

Which iSCSI name requires an organization to own a registered domain name?

- A.** WWPN
- B.** EUI
- C.** IQN
- D.** WWNN

**Answer: C**

Explanation:

iSCSI Name A unique worldwide iSCSI identifier, known as an iSCSI name, is used to identify the initiators and targets within an iSCSI network to facilitate communication. The unique identifier can be a combination of the names of the department, application, or manufacturer, serial number, asset number, or any tag that can be used to recognize and manage the devices. Following are two types of iSCSI names commonly used:

**iSCSI Qualified Name (IQN):** An organization must own a registered domain name to generate iSCSI Qualified Names. This domain name does not need to be active or resolve to an address. It just needs to be reserved to prevent other organizations from using the same domain name to generate iSCSI names. A date is included in the name to avoid potential conflicts caused by the transfer of domain names. An example of an IQN is `iqn.2008-02.com.example:optional_string`. The `optional_string` provides a serial number, an asset number, or any other device identifiers. An iSCSI Qualified Name enables storage administrators to assign meaningful names to iSCSI devices, and therefore, manage those devices more easily.

**Extended Unique Identifier (EUI):** An EUI is a globally unique identifier based on the IEEE EUI-64 naming standard. An EUI is composed of the `eui` prefix followed by a 16-character hexadecimal name, such as `eui.0300732A32598D26`. In either format, the allowed special characters are dots, dashes, and blank spaces. EMC E10-001 Student Resource Guide. Module 6: IP SAN and FCoE
