### **NEW QUESTION: 2**

You have an Office 365 tenant that uses an Enterprise E3 subscription. You activate Azure Rights Management for the tenant.

You must test the service with the Development security group before you deploy Azure Rights Management for all users.

You need to enable Azure Rights Management for only the Development security group.

Which Windows PowerShell cmdlet should you run?

- A. Set-AadrmOnboardingControlPolicy
- B. Enable-AadrmSuperUserFeature
- C. Add-AadrmSuperUser
- D. Enable-Aadrm
- E. New-AadrmRightsDefinition

**Answer: A**

Explanation:

The Set-AadrmOnboardingControlPolicy cmdlet sets the policy that controls user on-boarding for Azure Rights

Management. This cmdlet supports a gradual deployment by controlling which users in your organization can protect content by using Azure Rights Management.

Example:

Restrict Azure RMS to users who are members of a specified group

This command allows only users that are members of the security group with the specified object ID to protect content by using Azure Rights Management. The command applies to Windows clients and mobile devices.

Windows PowerShell

```
PS C:> Set-AadrmOnboardingControlPolicy -UseRmsUserLicense $False  
-SecurityGroupObjectId "f
```

Incorrect answers:

Not A: The Enable-Aadrm cmdlet enables the capabilities of Azure Rights Management for your

organization. When you activate Rights Management, you turn on this feature for all rights-enabled services and applications. You must activate Rights Management before you can begin to use information rights management (IRM) features with your applications.

Not B: The New-AadrmRightsDefinition cmdlet creates a Rights Definition object. A Rights Definition object expresses the rights of a user or group to content that Azure Rights Management protects. Use Rights Definition objects to define rights in a rights policy template.

Not C: The Enable-AadrmSuperUserFeature cmdlet enables the super user feature. With this feature enabled, you can add or remove super users for Azure Rights Management. By default, the super users feature is not enabled, and no users are assigned to this feature.

Not D: The Add-AadrmSuperUser cmdlet adds a super user for your organization.

### NEW QUESTION: 4

Your manager requires you to setup a VPN to a new business partner site. The administrator from the partner site gives you his VPN settings and you notice that he setup AES 128 for IKE phase 1 and AES 256 for IKE phase 2. Why is this a problematic setup?

- A. Only 128 bit keys are used for phase 1 keys which are protecting phase 2, so the longer key length in phase 2 only costs performance and does not add security due to a shorter key in phase 1.
- B. All is fine and can be used as is.
- C. All is fine as the longest key length has been chosen for encrypting the data and a shorter key length for higher performance for setting up the tunnel.
- D. The two algorithms do not have the same key length and so don't work together. You will get the error .... No proposal chosen....
