NEW QUESTION: 1

A contingency plan should address:

- A. All of the above
- B. Identified risks
- C. Potential risks
- D. Residual risks

Answer: D

NEW QUESTION: 2

You administer all the deployments of Microsoft SQL Server 2012 in your company.

You need to ensure that an OLTP database that uses a storage area network (SAN) remains available if any of the servers fail.

You also need to minimize the amount of storage used by the database.

Which configuration should you use?

- A. Two servers configured on the same subnet

SQL Server Availability Group configured in Synchronous-Commit Availability Mode

B. SQL Server that includes an application database configured to perform transactional replication

C. Two servers configured in different data centers

SQL Server Availability Group configured in Synchronous-Commit Availability Mode

One server configured as an Active Secondary

D. SQL Server that includes an application database configured to perform snapshot replication

E. Two servers configured in the same data center

A primary server configured to perform log-shipping every 10 minutes

A backup server configured as a warm standby

F. Two servers configured in the same data center

SQL Server Availability Group configured in Asynchronous-Commit Availability Mode

One server configured as an Active Secondary

G. Two servers configured in different data centers

SQL Server Availability Group configured in Asynchronous-Commit Availability Mode

H. Two servers configured in a Windows Failover Cluster in the same data center

SQL Server configured as a clustered instance

Answer: H

Explanation:

I'll stick with "H" as that seems the logical choice.

NEW QUESTION: 3

Company has determined that it should make use of a high-volume, enterprise-oriented SQLcompliant database solution. Which of the following is the LEAST appropriate choice for the company?

A. Oracle

B. Sybase

C. DB2

D. Microsoft Access

Answer: D

NEW QUESTION: 4

You have an Azure Active Directory (Azure AD) tenant and Windows 10 devices.

You configure a conditional access policy as shown in the exhibit. (Click the Exhibit tab.)

What is the result of the policy?

A. Users will be prompted for multi-factor authentication (MFA) only when they sign in from devices that are joined to Azure AD.

B. All users will be able to sign in without using multi-factor authentication (MFA).

C. Users will be prompted for multi-factor authentication (MFA) only when they sign in from devices that are NOT joined to Azure AD.

D. All users will always be prompted for multi-factor authentication (MFA).

Answer: B

Explanation:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/tutorial-enable-azure-mfa> "Conditional Access policies can be set to Report-only if you want to see how the

configuration would impact users, or Off if you don't want to the use policy right now. As a test group of users was targeted for this tutorial, lets enable the policy and then test Azure AD Multi-Factor Authentication.
