### **NEW QUESTION: 1**

You have an Azure Active Directory (Azure AD) tenant that contains the user groups shown in the following table.

You enable self-service password reset (SSPR) for Group1.

You configure the Notifications settings as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
NOTE: Each correct selection is worth one point.

### **Answer:**

Explanation:

Explanation

Box 1: Yes

Notify all admins when other admins reset their passwords: Yes.

Box 2: No

Notify users on password resets: No.

Box 3: No

\* Notify users on password resets

If this option is set to Yes, then users resetting their password receive an email notifying them that their password has been changed. The email is sent via the SSPR portal to their primary and alternate email addresses that are on file in Azure AD. No one else is notified of the reset event.

\* Notify all admins when other admins reset their passwords

If this option is set to Yes, then all administrators receive an email to their primary email address on file in Azure AD. The email notifies them that another administrator has changed their password by using SSPR.

Example: There are four administrators in an environment. Administrator A resets their password by using SSPR. Administrators B, C, and D receive an email alerting them of the password reset.

## **NEW QUESTION: 2**

Tim's day to day responsibilities include monitoring health of devices on the network. He uses a Network Monitoring System supporting SNMP to monitor the devices for any anomalies or high traffic passing through the interfaces.

Which of the protocols would be BEST to use if some of the requirements are to prevent easy disclosure of the SNMP strings and authentication of the source of the packets?

**A. SNMP V1**

**B. UDP**

**C. SNMP V2**

**D. SNMP V3**

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

Simple Network Management Protocol (SNMP) was released to the networking world in 1988 to help with the growing demand of managing network IP devices. Companies use many types of products that use SNMP to view the status of their network, traffic flows, and the hosts within the network.

SNMP uses agents and managers. Agents collect and maintain device-oriented data, which are held in management information bases. Managers poll the agents using community string values for authentication purposes.

SNMP versions 1 and 2 send their community string values in cleartext, but with SNMP version 3, cryptographic functionality has been added, which provides encryption, message integrity, and authentication security. So any sniffers that are installed on the network cannot sniff SNMP traffic.

Incorrect Answers:

A: UDP is not a protocol used to monitor network devices.

B: SNMP versions 1 and 2 send their community string values in cleartext. This does not prevent easy disclosure of the SNMP strings and authentication of the source of the packets.

D: SNMP versions 1 and 2 send their community string values in cleartext. This does not prevent easy disclosure of the SNMP strings and authentication of the source of the packets.

**NEW QUESTION: 3**

When recording the closing of a loan, you can link to the account that was used to book the loan origination.

Which option would you choose in Journal Line Rule?

- A. Link Journal Lines Options set to BusinessFlow
- B. Link Journal Lines Options set to None
- C. Link Journal Lines Options set to Copy from Corresponding Line
- D. Journal Line Rule Conditions
- E. Merge Matching Lines to All

**Answer: A**

Explanation:

The Link Journal Lines Option: Determines whether the journal line rule is set up to establish a link between the accounting of transactions that are related both within the same application, and across applications. The alternatives are described below:

\*None

No link is established.

\*Copy from corresponding line

Build account for a journal line using segments from the offsetting entry of the current journal line.

For example, when the business process requires that a cost center incurring an expense must also bear the invoice liability and cash outlay.

\*Business flow

Link logically related business transactions. For example, when recording the closing of a loan, you

can link to the account that was used to book the loan origination. Journal line rules that are linked

must also be assigned the same business flow class.
