APP On-line version: Functions of APP version of PL-400 exams cram are mostly same with soft version.

NEW QUESTION: 1
Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2. The domain contains two domain controllers.
The domain controllers are configured as shown in the following table.

You configure a user named User1 as a delegated administrator of DC10.
You need to ensure that User1 can log on to DC10 if the network link between the Main site and the Branch site fails.
What should you do?
A. On DC10, run ntdsutil and configure the settings in the Roles context.
B. Add User1 to the Domain Admins group.
C. Run repadmin and specify the /prp parameter.
D. On DC10, modify the User Rights Assignment in Local Policies.
Answer: C
Explanation:
repadmin /prp will allow the password caching of the local administrator to the RODC.
This command lists and modifies the Password Replication Policy (PRP) for read-only domain controllers (RODCs). Reference: RODC Administration

NEW QUESTION: 2
You are configuring a Team Foundation Server (TFS) Agent, which will execute an application on a Windows 7 desktop computer.
You log on to the Windows 7 desktop computer as the user who will execute the test. The test controller machine and the Windows 7 desktop computer are in the same domain.
You need to enable the TFS Agent to execute the application on the Windows 7 desktop computer.
Which two actions should you perform? Each correct answer presents part of the solution.
A. Create a new test controller by using a local user account that is a member of the local administrators group.
B. Add the user that was used to start the interactive process as a member of the TestAgentServiceGroup on the computer for the test controller for the agent.
C. After performing the configuration steps, log off or reboot the Windows 7 desktop computer.
D. Use the Configure Test Agent feature, and select Interactive Process for the Run option.
Answer: B,D
Explanation:

NEW QUESTION: 3
DRAG DROP
Your company has a private cloud that is managed by using a System Center 2012 Operations
Manager infrastructure. The infrastructure contains a management server named Server 1.
The network contains two subnets named Subnet1 and Subnet2. The two subnets are
separated by a firewall that prevents SNMP communications.
Server1 is located on Subnet1.
A switch named Switch1 is located on Subnet2.
Switch1 has the following configurations:
Network ID: 172.23.1.0/23
IPv4 address: 172.23.1.55
IPv6 address: fec0:2308::12
You need to discover Switch1.
What should you configure from the Computer and Device Management Wizard?
To answer, drag the appropriate values to the correct locations in the answer area. (Each value
may be used once, more than once, or not at all.)

Answer:
Explanation:

Explanation:

Section: Operations Manager Explicit discovery - An explicit discovery rule will only attempt to
discover those devices that you explicitly specify in the wizard by IP address or FQDN. It will
only monitor those devices that it can successfully access. The rule will attempt to access the
device by using ICMP, SNMP, or both depending on the configuration of the rule.

NEW QUESTION: 4
Which of the following DoD Model layer provides non-repudiation services?
A. data link layer.
B. application layer.
C. transport layer.
D. network layer.
Answer: B
Explanation:
Explanation/Reference:
The Application Layer determines the identity of the communication partners and this is where
Non- Repudiation service would be provided as well. See the layers below:

DOD Model DoD Model
The following answers are incorrect:
network layer. Is incorrect because the Network Layer mostly has routing protocols, ICMP, IP,
and IPSEC.
It it not a layer in the DoD Model. It is called the Internet Layer within the DoD model.

transport layer. Is incorrect because the Transport layer provides transparent transfer of data between end users. This is called Host-to-Host on the DoD model but sometimes some books will call it Transport as well on the DoD model.

data link layer. Is incorrect because the Data Link Layer defines the protocols that computers must follow to access the network for transmitting and receiving messages. It is part of the OSI Model. This does not exist on the DoD model, it is called the Link Layer on the DoD model.
