But getting a certificate is not so handy for candidates. Some people may worry about the safety of their money. We promise to provide a high-quality simulation system with advanced NSE4_FGT-7.0 study materials.

NEW QUESTION: 1

Refer to the exhibit.

Which feature can R1 use to fail over from R2 to R3 if the address for R2 becomes unavailable?

- A. HSRP
- B. LACP
- C. GLBP
- D. object tracking

Answer: D

Explanation:

The object tracking feature allows you to create a tracked object that multiple clients can use to modify the client behavior when a tracked object changes. Several clients register their interest with the tracking process, track the same object, and take different actions when the object state changes.

Clients include the following features:

- * Embedded Event Manager (EEM)
- * Gateway Load Balancing Protocol (GLBP)
- * Hot Standby Redundancy Protocol (HSRP)
- * Virtual port channel (vPC)
- * Virtual Router Redundancy Protocol (VRRP)

The object tracking monitors the status of the tracked objects and communicates any changes made to interested clients. Each tracked object is identified by a unique number that clients

can use to configure the action to take when a tracked object changes state.
