NEW QUESTION: 1

Answer:

Explanation:

Solution Steps need to follow as below:

When we check on client 1 & Client 2 desktop we are not receiving DHCP address from R4
ipconfig ----Client will be receiving IP address 10.2.1.3

IP 10.2.1.3 will be able to ping from R4 , but cannot ping from R3, R2, R1

This clearly shows problem at R4 since EIGRP is between DSW1, DSW2 & R4 and OSPF protocol is running between R4, R3, R2, R1 so routes from R4 are not propagated to R3, R2, R1

Since R4 is able to ping 10.2.1.3 it means that routes are received in EIGRP & same needs to be advertised in OSPF to ping from R3, R2, R1.

Need to check the routes are being advertised properly or not in OSPF & EIGRP vice-versa.

From above snap shot it clearly indicates that redistribution done in EIGRP is having problem & by default all routes are denied from ospf to EIGRP... so need to change route-map name.

Change required: On R4, in redistribution of EIGRP routing protocol, we need to change name of route-map to resolve the issue...

So in ticket Answer to the fault condition will be as below for
