Okta-Certified-Professional exam dumps of us , we will refund your money or if you need to attend other exam, we will replace other 2 valid exam dumps for free.

Free PDF Quiz Okta-Certified-Professional - Updated Okta Certified Professional Exam Test Simulator

Before you take the Okta-Certified-Professional exam, you only need to spend 20 to 30 hours to practice, so you can schedule time to balance learning and other things, Buildindustryastana helps you to [Okta-Certified-Professional](#) uproot your ambiguities regarding Okta Certified Professional Exam Exam dumps material, before Purchase.

Because our Okta-Certified-Professional test engine is virus-free, you can rest assured to use, The feedback of our returned customer said that almost exam questions of real exam appeared in our Okta Certified Professional Exam examsboost review.

Our windows software and online test engine of the Okta-Certified-Professional exam questions are suitable for all age groups, For the preparation of these we have certified experts.

You just have to browse our site and then click on the subject of your interest, You can also check the testimonials of the Okta-Certified-Professional test questions to get the better idea of the Okta Certified Professional Exam pdf dumps.

Online test engine supports offline practice, while **Test Okta-Certified-Professional Simulator** the precondition is that you should run it with the internet at the first time, Easier way to succeed.

NEW QUESTION: 1

DRAG DROP

You are configuring a test network. The test network contains a subnet named LAN1. LAN1 uses the network ID of 10.10.1.0/27.

You plan to add a new subnet named LAN2 to the test network.

LAN1 and LAN2 will be connected by a router.

You need to identify a valid network ID for LAN2 that meets the following requirements:

Ensures that hosts on LAN2 can communicate with hosts on LAN1.

Supports at least 100 IPv4 hosts.

Uses only private IP addresses.

Which network ID should you use?

To answer, drag the appropriate network ID and subnet mask to the correct location in the answer area.

Select and Place:

Answer:

Explanation:

Explanation/Reference:

Explanation:

The Subnet Mask specifies which bits of the IP address identify the host system and which bits identify the network where the host system resides.

NEW QUESTION: 2

右から適切なセクションに追加するには、左から説明をドラッグします。

Answer:

Explanation:

Explanation

NEW QUESTION: 3

The BA is finalizing the definition of the requirements architecture by understanding how requirements relate to each other. A key component that must be apparent in all three diagrams is that none of the requirements be linked in different or conflicting ways. What relationship quality criterion does this represent?

- A. Necessary
- B. Unambiguous
- C. Correct
- D. Defined

Answer: B

NEW QUESTION: 4

Drag and drop the descriptions from the left onto the configuration-management technologies on the right.

Ansible:

- uses SSH for remote device communication
- uses YAML for fundamental configuration elements

Chef:

- uses TCP port 10002 for configuration push jobs
- uses Ruby for fundamental configuration elements

Puppet:

- fundamental configuration elements are stored in a manifest
- uses TCP 8140 for communication

The focus of Ansible is to be streamlined and fast, and to require no node agent installation. Thus, Ansible performs all functions over SSH. Ansible is built on Python, in contrast to the Ruby foundation of Puppet and Chef.

TCP port 10002 is the command port. It may be configured in the Chef Push Jobs configuration file .

This port allows Chef Push Jobs clients to communicate with the Chef Push Jobs server.

Puppet is an open-source configuration management solution, which is built with Ruby and offers custom Domain Specific Language (DSL) and Embedded Ruby (ERB) templates to create custom Puppet language files, offering a declarative-paradigm programming approach.

A Puppet piece of code is called a manifest, and is a file with .pp extension.
