NEW QUESTION: 1

You administer a Microsoft SQL Server 2012 instance that contains a financial database hosted on a storage area network (SAN).

The financial database has the following characteristics:

A data file of 2 terabytes is located on a dedicated LUN (drive D). A transaction log of 10 GB is located

on a dedicated LUN (drive E).

Drive D has 1 terabyte of free disk space.

Drive E has 5 GB of free disk space.

The database is continually modified by users during business hours from Monday through Friday between

09:00 hours and 17:00 hours. Five percent of the existing data is modified each day.

The Finance department loads large CSV files into a number of tables each business day at 11:15 hours and 15:15 hours by using the BCP or BULK INSERT commands. Each data load adds 3 GB of data to the database.

These data load operations must occur in the minimum amount of time.

A full database backup is performed every Sunday at 10:00 hours. Backup operations will be performed every two hours (11:00, 13:00, 15:00, and 17:00) during business hours.

You need to ensure that the backup size is as small as possible.

Which backup should you perform every two hours?

- A. BULK_LOGGED
- B. CHECKSUM
- C. Differential
- D. NO_CHECKSUM
- E. RESTART

NEW QUESTION: 2

Ein Benutzer behauptet, keinen Internetzugang zu haben, kann jedoch auf lokale Ressourcen zugreifen. Ein Techniker stellt fest, dass das Problem bei einer Konfiguration liegt, da ein Ping an eine funktionierende öffentliche Website eine Antwort anzeigt, die mit Folgendem beginnt: Ping-Anfrage konnte Host nicht finden

Welche der folgenden Aussagen ist die wahrscheinlichste Fehlkonfiguration?

- A. SSL-Zertifikat

The administrator can see the traps for the failed login attempts, but cannot see the traps of successful login attempts. What command is needed to resolve the issue?

- A. Configure logging history 4
- B. Configure logging history 5
- C. Configure logging history 2
- D. Configure logging history 3

Answer: B

Explanation:

By default, the maximum severity sent as a syslog trap is warning. That is why you see syslog traps for login failures. Since a login success is severity 5 (notifications), those syslog messages will not be converted to traps. To fix this, configure:

Note:

login block-for seconds attempts tries within seconds
