Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirement, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the button to return to the question.

### NEW QUESTION: 3

There is a requirement to invoke the Orders form from the Customers form. Your colleagues offer some suggestions about which built-in to use and their reasons for the choice. Which suggestion names a built-in that will meet the requirement and offers a correct reason?

A. OPEN\_FORM, because the second form is invoked in a modal state and there can be only one "Open form stack"

B. OPEN\_FORM, because it causes a savepoint to be issued and the current form is validated before invoking the second form.

C. NEW\_FORM, because the second form is invoked in a modeless state and the user can navigate freely between the two running forms

D. CALL\_FORM, because the second form is invoked in a modeless state and it saves on memory resources

E. CALL\_FORM, because NEW\_FORM is no longer valid for Web-deployed forms due to the extra network traffic that it causes

F. CALL\_FORM, because it can be issued in Enter-Query mode and can be constrained to be "query only"

**Answer: F**
