Anschließend haben wir das Umsatzwachstum, die Rentabilität und andere
Leistungsindikatoren für jede dieser Kategorien verglichen.

Und tatsächlich, Onkel Vernon nahm eine **H12-722-ENU Online Tests** noch dunklere
Rotschattierung an und fixierte Mr, Er griff nach den Fallen.

NEW QUESTION: 1

Somerset Investment Limited is a Singapore-based money management firm that is conducting
an appraisal of its investment performance. Cameron Li, CFA, has been charged with
conducting the appraisal, and is to report back to upper management with his findings.

Li is convinced that trade executions play a substantial role in overall portfolio performance,
particularly for funds that have a relatively high level of turnover during the year. As a result, he
is seeking methods that will allow him to evaluate the quality of trade executions.

He knows that the firm's traders use both market and limit orders, and he is wondering if a
framework can be developed to ensure that the best order type is used under the specific
circumstances for each trade.

When he consults with the firm's head trader, Rick Gleeson, Gleeson tells him that market
orders have price uncertainty but no execution uncertainty, while limit orders eliminate price
uncertainty but have execution uncertainty. According to Gleeson, rebalancing and
liquidity-motivated trades should use limit orders while value-motivated and
information-motivated trades should use market orders.

Li knows that bid-ask spreads are a major component of trading costs, and asks Gleeson for
some recent trade data that he can use for analysis and presentation to management. He
receives the following data relating to a series of buy trades for Sumatra Natural Resources
(SNR), with all currency values in Singapore dollars:

Trades of Sumatra Natural Resources

Gleeson also tells Li that the portfolio manager had originally made the decision to purchase
5,000 SNR at

10:00 a.m. when the price was \$22.36. The closing price for the day was Leeson's last trade at
\$22.65, at which point the order for the remaining 2,000 shares was cancelled.

Assume that the four trades in Sumatra Natural Resources are the only trades in the security for
the day.

Determine which of the following statements concerning the volume weighted average price
(VWAP) is most correct.

A. The VWAP for the day is 22.470, and the trader's goal would be to have an average cost that is
less than the VWAP.

B. The VWAP for the day is 22.468, and the trader's goal would be to have an average cost that is
greater than the VWAP.

C. The VWAP for the day is 22.468, and the trader's goal would be to have an average cost rhat is
less than the VWAP

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The VWAP for the day = $(900 / 3,000) \times 22.33 + (600 / 3,000) \times 22.43 + (700 / 3,000) \times 22.47 + (800 / 3,000) \times 22.65 = 22.468$, and the trader's goal would be to have an average cost that is less than the VWAP if they are buying. (Srud Session 16, LOS 45-f)

NEW QUESTION: 2

In which of the following cost estimating techniques are statistics models used:

- A. life cycle cost estimating
- B. All of the other alternatives apply.
- C. bottom-up estimating
- D. parametric cost estimating
- E. nonparametric cost estimating

Answer: D

NEW QUESTION: 3

The implementations group has been using the test bed to do a 'proof-of-concept' that requires both Client 1 and Client 2 to access the WEB Server at 209.65.200.241. After several changes to the network addressing, routing scheme, DHCP services, NTP services, layer 2 connectivity, FHRP services, and device security, a trouble ticket has been opened indicating that Client 1 cannot ping the 209.65.200.241 address.

Use the supported commands to isolate the cause of this fault and answer the following questions.

What is the solution to the fault condition?

- A. Under the ip access-list extended edge_security configuration add the permit ip 209.65.200.224 0.0.0.3 any command.
- B. Under the interface Serial0/0/0 configuration delete the ip access-group edge_security in command and enter the ip access-group edge_security out command.
- C. Under the ip access-list extended edge_security configuration delete the deny ip 10.0.0.0 0.255.255.255 any command.
- D. Under the interface Serial0/0/1 enter the ip access-group edge_security out command.

Answer: A

Explanation:

On R1, we need to permit IP 209.65.200.222/30 under the access list.

Topic 12, Ticket 7 : Port Security

Topology Overview (Actual Troubleshooting lab design is for below network design)

-Client Should have IP 10.2.1.3 -EIGRP 100 is running between switch DSW1 & DSW2 -OSPF

(Process ID 1) is running between R1, R2, R3, R4 -Network of OSPF is redistributed in EIGRP

-BGP 65001 is configured on R1 with Webserver cloud AS 65002 -HSRP is running between DSW1 & DSW2 Switches

The company has created the test bed shown in the layer 2 and layer 3 topology exhibits.

This network consists of four routers, two layer 3 switches and two layer 2 switches.

In the IPv4 layer 3 topology, R1, R2, R3, and R4 are running OSPF with an OSPF process number 1.

DSW1, DSW2 and R4 are running EIGRP with an AS of 10. Redistribution is enabled where necessary.

R1 is running a BGP AS with a number of 65001. This AS has an eBGP connection to AS 65002 in the ISP's network. Because the company's address space is in the private range.

R1 is also providing NAT translations between the inside (10.1.0.0/16 & 10.2.0.0/16) networks

and
outside (209.65.0.0/24) network.
ASW1 and ASW2 are layer 2 switches.
NTP is enabled on all devices with 209.65.200.226 serving as the master clock source.
The client workstations receive their IP address and default gateway via R4's DHCP server.
The default gateway address of 10.2.1.254 is the IP address of HSRP group 10 which is running on DSW1 and DSW2.

In the IPv6 layer 3 topology R1, R2, and R3 are running OSPFv3 with an OSPF process number 6. DSW1, DSW2 and R4 are running RIPng process name RIP_ZONE.

The two IPv6 routing domains, OSPF 6 and RIPng are connected via GRE tunnel running over the underlying IPv4 OSPF domain. Redistribution is enabled where necessary.

Recently the implementation group has been using the test bed to do a 'proof-of-concept' on several implementations. This involved changing the configuration on one or more of the devices. You will be presented with a series of trouble tickets related to issues introduced during these configurations.

Note: Although trouble tickets have many similar fault indications, each ticket has its own issue and solution.

Each ticket has 3 sub questions that need to be answered & topology remains same.

Question-1 Fault is found on which device,

Question-2 Fault condition is related to,

Question-3 What exact problem is seen & what needs to be done for solution

=====

Client is unable to ping IP 209.65.200.241

Solution

Steps need to follow as below:

-When we check on client 1 & Client 2 desktop we are not receiving DHCP address from R4
ipconfig ----- Client will be getting 169.X.X.X

-On ASW1 port Fa1/0/ 1 & Fa1/0/2 access port VLAN 10 was assigned but when we checked interface it was showing down Sh run ----- check for running config of int fa1/0/1 & fa1/0/2 (switchport access Vlan 10 will be there with switch port security command). Now check as below

Sh int fa1/0/1 & sh int fa1/0/2 -As seen on interface the port is in err-disable mode so need to clear port.

-Change required: On ASW1, we need to remove port-security under interface fa1/0/1 & fa1/0/2.

NEW QUESTION: 4

Your customer is using budgetary control and encumbrance. You have an open purchase order for \$500 USD, which you decide to match to an invoice for \$300 USD.

What will be the fund status of the purchase order and invoice?

- A. The purchase order is Partially Liquidated and the invoice will be reserved.
- B. The purchase order is liquidated and the invoice is Partially Reserved.
- C. Both are Partially Reserved.
- D. The purchase order is Partially Liquidated and the invoice is Partially Reserved.
- E. Both are reserved.
- F. The purchase order is Open and the invoice is validated.

Answer: E
