### **NEW QUESTION: 1**

Your network contains clustered file servers and application servers that have local shares.

You plan to use Hardware Inventory to capture the Win32\_ClusterShare class.

You need to find all the file shares on the servers on the network. The solution must minimize the amount of information that is captured.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

### **Answer:**

Explanation:

### **NEW QUESTION: 2**

=====

Topic 1, Humongous Insurance

Background

Humongous Insurance currently employs 7,500 people and is based in the United States. The company has 4,000 users in its main office in Chicago. It also has two branch offices, one in New York with 2,000 users and the other in Los Angeles with 1,500 users. The company has 30 executives located across the offices.

The company recently migrated from Lync Server 2010 to Lync Server 2013. The company plans to increase the use of audio and video (A/V) conferencing to reduce travel costs. Employees have been asked to use A/V, telephony, and instant messaging (IM) conferencing solutions whenever possible for communication with clients and users in the branch offices.

Humongous Insurance is federated with Trey Research Corporation, which uses a third-party IM client. Users at both companies need to communicate with each other by using their respective IM client.

The company plans to continuously analyze the network to identify:

- potential network delay points and
- availability of adequate bandwidth to meet current requirements and anticipated growth.

The company plans to continuously analyze the Lync 2013 servers for performance metrics.

Planned Changes

Humongous is in discussion to acquire the Southridge Video company. Southridge Video has 2,000 users in two sites.

Employees of Humongous Insurance use a variety of mobile devices, including Windows Phones and iOS phones. All iOS phone users must be notified of events, such as new or missed IM invitations and voice mail messages, even when they are using the corporate wireless network.

All public switched telephone network (PSTN) traffic will use the G.711 codec.

All voice will use the RTAudio Wideband codec.

All peer-to-peer (P2P) video sessions will support H.264 and RTVideo codecs.

Audio bandwidth between the Los Angeles and New York offices is limited.

#### Challenges

All users report poor audio and video quality. Calls are dropped or suffer from jitter and lag.

These issues exist when users are using the Lync client or Lync Phone Edition. Humongous

Insurance users currently are unable to IM with external clients that use different IM programs.

Currently there is no network oversight for Lync communications. The company has no plans to increase the bandwidth at any sites.

Humongous Insurance does not have a defined remote user access policy.

#### Existing Environment

The three offices are connected to one another as shown in the following network diagram:

---

Additional information about the existing environment is shown in the Supporting Information section:

Overview of data centers

Detail of the Chicago data center

Overview of audio and video codec bandwidths

Employees of Humongous Insurance use various operating systems, including Windows XP, Windows Vista Enterprise, Windows 7 Enterprise, and Windows 8. All users are enabled for Enterprise Voice, and many have Lync Phone Edition.

The concurrent communication modalities usage of the three offices is shown in the following table:

Humongous Insurance expects to see the number of video users increase by as much as 10 percent. The company expects to see the number of voice users increase by as much as 15 percent.

All users at Humongous Insurance will be Lync enabled.

The company uses synthetic transactions to perform call and voice tests.

Many of the employees of Humongous Insurance work from home and sign in securely to the corporate environment in order to use Lync.

#### Business Requirements

Humongous Insurance would like to review the existing network topology and wants to ensure that network capacity will meet current Lync 2013 infrastructure capacity requirements for audio and video usage, as well as meet the anticipated increases.

All existing issues relating to the poor quality of Lync calls and conferencing need to be addressed.

Company policy allows for all employees to have the option to use video conferencing.

Employees will be limited to VGA video quality. Company executives will not have these limitations.

Quality of Service (QoS) ports must be unique for audio and video traffic.

The company wants to confirm that the current network bandwidth allocated for the network is sufficient for all current and anticipated growth in Lync traffic and would like to guarantee high-quality Lync calls and video conferencing.

Humongous Insurance wants to ensure that the volume of Lync traffic does not exceed 50 percent of WAN bandwidth.

The recommended design solution needs to eliminate the possibility of WAN oversubscription by Lync traffic.

Humongous Insurance wants to use only dedicated computers to monitor the network and perform synthetic transactions to limit the load on the computers.

The proposed Lync 2013 solution needs to provide scalability to accommodate the company's future acquisition of Trey Research.

The proposed Lync 2013 solution should be readily available for users in all three sites.

#### Technical Requirements

The company wants to allow only authorized employees to connect remotely.

All remote users will use a secure method when remotely connecting to the network and the Lync environment.

The number of open and listening ports must be kept to a minimum.

All maintenance and tests of network policies must be done outside of normal business hours.

Bandwidth between sites cannot be increased.

The quality of voice and video traffic must be increased.

The number of dropped calls must be reduced.

The corporate information technology (IT) department must be able to push updates and scan users' computers when they are connected remotely.

All push notifications must be able to be sent mobile clients on all supported cell phone manufactures. Many users do not use Windows mobile phones.

IM users must be able to IM with users who are using other IM programs.

The Microsoft Lync 2013 Bandwidth Calculator must be used to analyze Lync traffic.

It is recommended to deploy QoS for end-to-end support.

Mobile client users are supported only with Lync 2010 Mobile clients.

=====

You need to identify the current average amount of bandwidth required for public switched telephone network (PSTN) calls for all three sites.

Which bandwidth should you choose?

A. 61,725 Kbps

B. 36,375 Kbps

C. 16,800 Kbps

D. 23,250 Kbps

**Answer: B**

#### **NEW QUESTION: 3**

Tailspin Toys deploys Skype for Business Enterprise Voice.

Tailspin Toys executives must be able to call each other directly at any time irrespective of their presence status.

You need to configure the Enterprise Voice solution.

What should you do?

A. Create a private telephone line for all executives and share the associated phone number of all the members with each other.

B. Set the value of the privacy relationship setting for each executive team contact to the value Workgroup.

C. Set the value of the simultaneous ring setting for all executives to Ring my delegates after 10 seconds.

D. Create a second SIP address for each executive, assign a TelUri, and ask the members to manually add the second SIP address of other members in the contact list.

**Answer: B**
