NEW QUESTION: 1

In this section, you'll see one or more sets of questions with the same scenario and problem

Each question

presents a unique solution to the problem, and you must determine whether the solution meets the stated goals.

Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions

will not appear in the review screen

Note: This question is part of a series of questions that present the same scenario. Each question in the series

contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server

named Server1. All client computers run Windows 10.

On Server1, you have the following zone configuration

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4

Server1 must

resolve queries from all other DNS clients

Solution From the Security setting of each zone on Server1, you modify the permissions

Does this meet the goal?

A. No

B. Yes

Answer: A

NEW QUESTION: 2

On a corporate network, hosts on the same VLAN can communicate with each other, but they are unable to

communicate with hosts on different VLANs. What is needed to allow communication between the VLANs?

A. a switch with a trunk link that is configured between the switches

B. a router with subinterfaces configured on the physical interface that is connected to the switch

C. a switch with an access link that is configured between the switches

D. a router with an IP address on the physical interface connected to the switch

Answer: B

Explanation:

Different VLANs can't communicate with each other, they can communicate with the help of Layer3 router. Hence, it is needed to connect a router to a switch, then make the sub-interface on the router to connect to the switch, establishing Trunking links to achieve communications of devices which belong to different VLANs.

When using VLANs in networks that have multiple interconnected switches, you need to use VLAN trunking between the switches. With VLAN trunking, the switches tag each frame sent between switches so that the receiving switch knows to what VLAN the frame belongs. End user devices connect to switch ports that provide simple connectivity to

a single VLAN each. The attached devices are unaware of any VLAN structure.

By default, only hosts that are members of the same VLAN can communicate. To change this and allow inter-VLAN communication, you need a router or a layer 3 switch.

Here is the example of configuring the router for inter-vlan communication

```
RouterA(config)#int f0/0.1
```

```
RouterA(config-subif)#encapsulation ?
```

```
dot1Q IEEE 802.1Q Virtual LAN
```

```
RouterA(config-subif)#encapsulation dot1Q or isl VLAN ID
```

```
RouterA(config-subif)# ip address x.x.x.x y.y.y.y
```

NEW QUESTION: 3

What is a function of the vmmemctl driver?

- A. allows the operation of unsupported guest OS types
- B. reclaims unused memory from the guest OS
- C. enables swapping of the virtual machines
- D. enables Transparent Page Sharing

Answer: B

NEW QUESTION: 4

Fill in the blank: The R80 feature _____ permits blocking specific IP addresses for a specified time period.

- A. Local Interface Spoofing
- B. Suspicious Activity Monitoring
- C. Block Port Overflow
- D. Adaptive Threat Prevention

Answer: B

Explanation:

Suspicious Activity Rules Solution Suspicious Activity Rules is a utility integrated into SmartView Monitor that is used to modify access privileges upon detection of any suspicious network activity (for example, several attempts to gain unauthorized access).

The detection of suspicious activity is based on the creation of Suspicious Activity rules.

Suspicious Activity rules are Firewall rules that enable the system administrator to instantly block suspicious connections that are not restricted by the currently enforced security policy.

These rules, once set (usually with an expiration date), can be applied immediately without the need to perform an Install Policy operation
