It can be download in personal computer unlimited times, It is recognized [Exam HP5-C09D Testking](#) in more than 90 countries around the world, We offer 24/7 customer support to all our Nokia Network and Service Router Security product esteemed users.

NEW QUESTION: 1
The manager of the firewall team is getting complaints from various IT teams that firewall changes are causing issues. Which of the following should the manager recommend to BEST address these issues?
A. Require the firewall team to verify the change with the requesting team before pushing the updated firewall policy.
B. Require every new firewall rule go through a secondary firewall administrator for review before pushing the firewall policy.
C. Set up a weekly review for relevant teams to discuss upcoming changes likely to have a broad impact.
D. Update the change request form so that requesting teams can provide additional details about the requested changes.
Answer: C

NEW QUESTION: 2

A. WPA
B. WEP
C. WAP
D. Kerberos
Answer: A,B
Explanation:
WPA and WEP can be used to encrypt wireless networks. WPA stands for Wi-Fi Protected Access. It is a wireless security standard. It provides better security than WEP (Wired Equivalent Protection). Windows Vista supports both WPA-PSK and WPA-EAP. Each of these is described as follows: WPA-PSK: PSK stands for Preshared key. This standard is meant for home environment. WPA-PSK requires a user to enter an 8-character to 63-character passphrase into a wireless client. The WPA converts the passphrase into a 256-bit key. WPA-EAP: EAP stands for Extensible Authentication Protocol. This standard relies on a back-end server that runs Remote Authentication Dial-In User Service for user authentication. Note: Windows Vista supports a user to use a smart card to connect to a WPA-EAP protected network. Wired Equivalent Privacy (WEP) is a security protocol for wireless local area networks (WLANs). It has two components, authentication and encryption. It provides security, which is equivalent to wired networks, for

wireless networks. WEP encrypts data on a wireless network by using a fixed secret key. WEP incorporates a checksum in each frame to provide protection against the attacks that attempt to reveal the key stream. Answer option B is incorrect. Kerberos is a computer network authentication protocol that allows individuals communicating over a non-secure network to prove their identity to one another in a secure manner. Answer option A is incorrect. The Wireless Access Protocol (WAP) is a technology used with wireless devices. The functionality of WAP is equivalent to that of TCP/IP. WAP uses a smaller version of HTML called Wireless Markup Language (WML) to display Internet sites.
