NEW QUESTION: 1

A. Option B
B. Option A
C. Option D
D. Option C
Answer: B

NEW QUESTION: 2
You plan to deploy Microsoft SQL Server on a Microsoft Azure Virtual machine. The virtual machine will have a 30-TB database and will have 10 1-TB VHDs for the database.
You need to configure the storage to meet the following requirements:
Evenly distribute read and write operations across the VHDs.
Minimize the read and write time.
Which storage configuration should you use?
A. a mirrored storage pool
B. a simple storage pool
C. a parity storage pool
D. a RAID-5 volume
E. a striped volume
Answer: E
Explanation:
Data that is written to a striped volume is interleaved to all disks at the same time instead of sequentially.
Therefore, disk performance is the fastest on a RAID 0 volume as compared to any other type of disk configuration.

NEW QUESTION: 3
Your network contains an Active Directory forest named contoso.com. The forest contains four domains. All servers run Windows Server 2012 R2.

Each domain has a user named User1.
You have a file server named Server1 that is used to synchronize user folders by using the Work Folders role service.
Server1 has a work folder named Sync1.
You need to ensure that each user has a separate folder in Sync1.
What should you do?
A. Run the Set-SyncServerSetting cmdlet.
B. From File and Storage Services in Server Manager, modify the properties of Sync1.
C. From Windows Explorer, modify the Sharing properties of Sync1.
D. Run the Set-SyncShare cmdlet.
Answer: D
Explanation:
The Set-SyncShare cmdlet modifies the settings for a sync share.
Example: Modify a sync share to add a user group
This example modifies settings on the share named Share01, and enables the user group named ContosoEngGroup to access the share.
The first command uses the Get-SyncShare cmdlet to retrieve the sync share for Share01, and assigns the results to the variable $Current.
The second command uses the Set-SyncShare cmdlet to modify the sync share and add the current user and the ContosoEngGroup to the list of users allowed to access the share.
PS C:> $Current = Get-SyncShare Share01
PS C:> Set-SyncShare Share01 -User $Current.user,"ContosoEngGroup"
