Answer: A,B

NEW QUESTION: 2

What technical control provides the most critical layer of defense if an intruder is able to bypass all physical security controls and obtain tapes containing critical data?

- A. Shredding
- B. Security guards
- C. Corrective Controls
- D. Encryption
- E. Camera Recordings

Answer: D

NEW QUESTION: 3

Which of the following types of application attacks would be used to specifically gain unauthorized information from databases that did not have any input validation implemented?

- A. Buffer overflow and XSS
- B. Session hijacking and XML injection
- C. SQL injection
- D. Cookies and attachments

Answer: C

Explanation:

To access information in databases, you use SQL. To gain unauthorized information from databases, a SQL Injection attack is used.

SQL injection is a code injection technique, used to attack data-driven applications, in which malicious SQL statements are inserted into an entry field for execution (e.g. to dump the database contents to the attacker). SQL injection must exploit a security vulnerability in an application's software, for example, when user input is either incorrectly filtered for string literal escape characters embedded in SQL statements or user input is not strongly typed and unexpectedly executed. SQL injection is mostly known as an attack vector for websites but can be used to attack any type of SQL database.

NEW QUESTION: 4

What is one difference between containers and virtual servers?

- A. Containers create a self-defined computer
- B. Containers provide hardware virtualization
- C. Containers are created by using a hypervisor
- D. Containers share an operating system kernel

Answer: B
