NEW QUESTION: 1

What key business issue was addressed when Java batch processing support was included in WAS ND and WAS for z/OS?

- A. The need to move batch processing workloads off of mainframe systems
- B. All of the above
- C. The need to leverage programming skills of Java developers on staff
- D. The need for mobile applications to be available 24 hours a day, 7 days a week
- E. The need to run batch and online transaction processing concurrently on one platform

Answer: D

NEW QUESTION: 2

You have a Microsoft 365 subscription.

You are planning a threat management solution for your organization.

You need to minimize the likelihood that users will be affected by the following threats:

- * Opening files in Microsoft SharePoint that contain malicious content
- * Impersonation and spoofing attacks in email messages

Which policies should you create in the Security & Compliance admin center? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: ATP Safe Attachments

ATP Safe Attachments provides zero-day protection to safeguard your messaging system, by checking email attachments for malicious content. It routes all messages and attachments that do not have a virus/malware signature to a special environment, and then uses machine learning and analysis techniques to detect malicious intent. If no suspicious activity is found, the message is forwarded to the mailbox.

Box 2: ATP anti-phishing

ATP anti-phishing protection detects attempts to impersonate your users and custom domains. It applies machine learning models and advanced impersonation-detection algorithms to avert

phishing attacks.

ATP Safe Links provides time-of-click verification of URLs, for example, in emails messages and Office files.

Protection is ongoing and applies across your messaging and Office environment. Links are scanned for each click: safe links remain accessible and malicious links are dynamically blocked.
